**DETAILED ACTION*****Allowable Subject Matter***

1. Claims 9-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record, Leong to U.S. 5,192,697 discloses sequential formation of conductive layer 12, oxide layer 13, 1000-2000 Å oxide/5000-6000 Å BPSG or PSG layer 16, conductive layer 20, 3000-4000 Å oxide layer 22, 2000-2400 Å SOG layer 24 and further oxide layer 26. Conductive layer 12 and layer 16 are patterned. The reference discloses implantation of Ar ions at a dose of  $5 \times 10^{-5}$  -  $1 \times 10^{16}$  cm<sup>-2</sup> and an energy of 40-140 KeV to cure layer 24. The reference indicates the energy and dose to affect breakdown voltage and volume shrinkage (col.4, lines 33-43 and col.5, lines 49-51). Applicant indicates that 140 KeV implantation through a 4000 Å SOG layer penetrates the layer (instant pages 14-16). Therefore, at least a portion of the range of energies disclosed as suitable by Leong would penetrate the thickness of SOG disclosed by Leong. Applicant also indicates that 2000 Å of oxide is sufficient to substantially prevent penetration to the underlying metal. Therefore, the 3000-4000 Å oxide layer 22 would prevent ion penetration into conductive layer 20 and the 3000-4000 Å oxide layer 22 in combination with the 1000-2000 Å oxide/5000-6000 Å BPSG or PSG layer 16 would prevent penetration into conductive layer 12.

However, Leong fails to teach forming the intrusion prevention film to selectively cover said conductive layer as taught in claim 9, nor patterning said

Art Unit: 2823

conductive layer and said intrusion prevention film simultaneously by using a same mask as taught in claim 18.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
